

Step1: Go to Labs URL: <https://portal.azure.com/>

Step2:

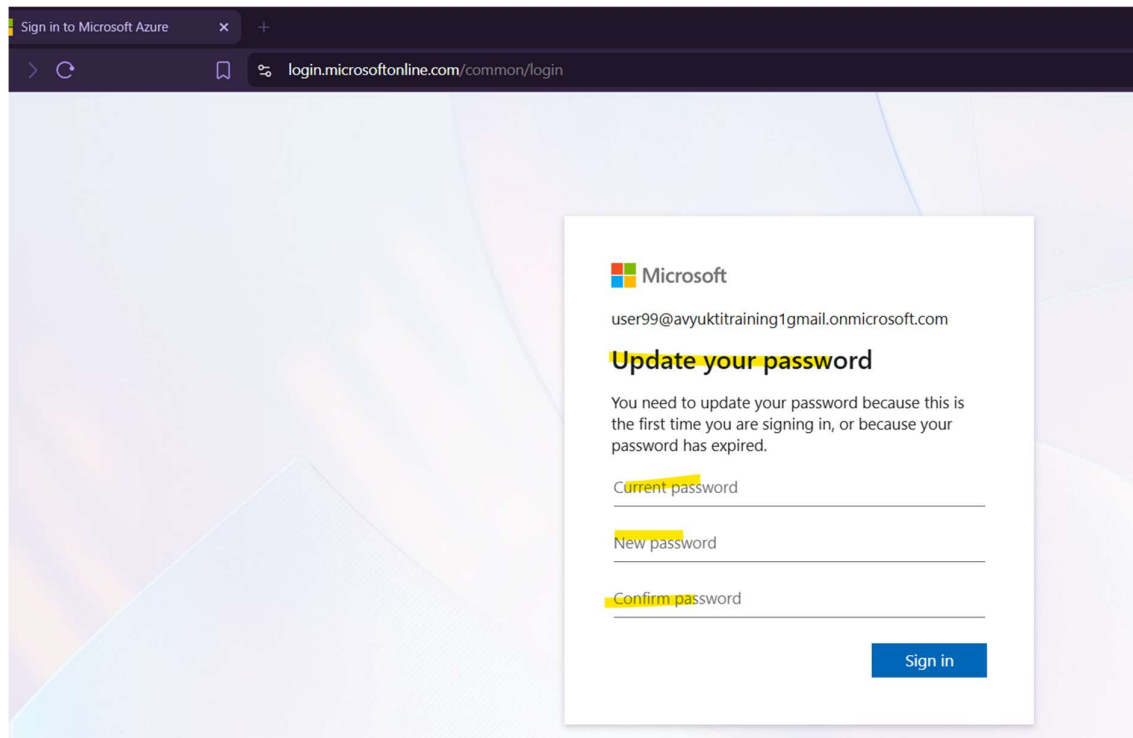

Put username: user99@avyuktitraining1gmail.onmicrosoft.com

Put the password: *****

Step3: Update your password

A screenshot of a web browser showing the Microsoft password update page. The browser's address bar displays 'login.microsoftonline.com/common/login'. The page features a white card with the Microsoft logo and the user's email address, 'user99@avyuktitraining1gmail.onmicrosoft.com'. The heading 'Update your password' is followed by an explanation: 'You need to update your password because this is the first time you are signing in, or because your password has expired.' Below this, there are three input fields labeled 'Current password', 'New password', and 'Confirm password'. A blue 'Sign in' button is positioned at the bottom right of the card.

LAB STEPS – SET UP MICROSOFT AUTHENTICATOR APP

1 Install the App Download Microsoft Authenticator from Play Store (Android) or App Store (iOS).	2 Open the App Open the app and tap Accept. Allow Camera and Notifications.	3 Add Account Tap + Add account and choose Work or school account.	4 Go to Security Info On your PC/Browser, go to https://mysignins.microsoft.com/security-info and sign in.	5 Add Sign-in Method Click Add sign-in method and select Authenticator app. Click Add.
				

SET UP AUTHENTICATOR APP IN MOBILE (STEP-BY-STEP)

6 Scan QR Code On the Security info page, you will see a QR code. In the app, tap Scan QR code and scan the QR code shown on your screen.	7 Approve Notification After scanning, a test notification will be sent to your mobile. Tap Approve to verify.	8 Account Added Once approved, your account will be added successfully in the app.	9 Enable Passwordless (Recommended) Open the account in the app and enable Phone sign-in for passwordless experience.	10 Setup Complete You can now use Microsoft Authenticator for secure sign-in approvals and passwordless login.
				

TROUBLESHOOTING TIPS

- QR code not scanning? Try increasing screen brightness or zoom out the browser page.
- Notifications not coming? Enable notifications and allow background activity for the app.
- Can't add account? Check your internet connection and try again.

COMMON USAGE

Apple devices use the App Store and Google devices use the Google Play Store.

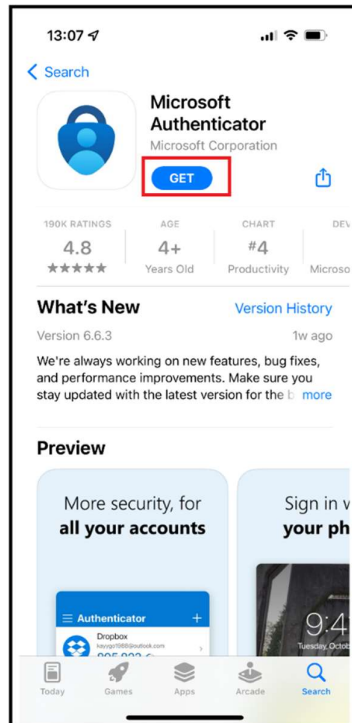

1. Search for the Microsoft Authenticator app

[Microsoft Authenticator app for iOS devices](#)

[Microsoft Authenticator app for Google devices](#)

2. Tap on the **Get** button

The screenshot may vary based on the device and whether using Apple or Google.

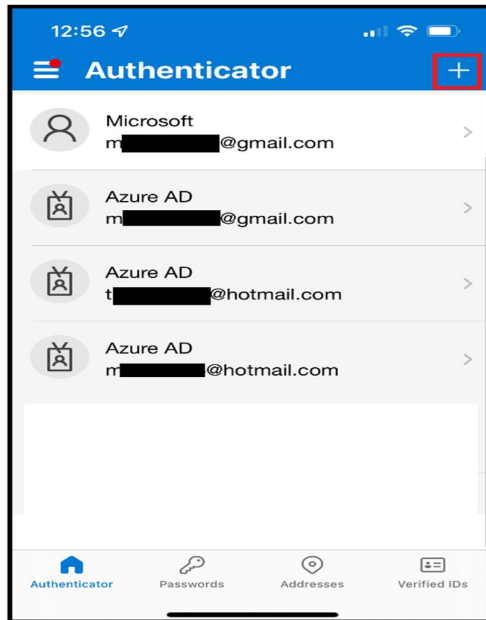

3. Depending on the settings on the device, you may be required to enter a password for the appropriate App store.

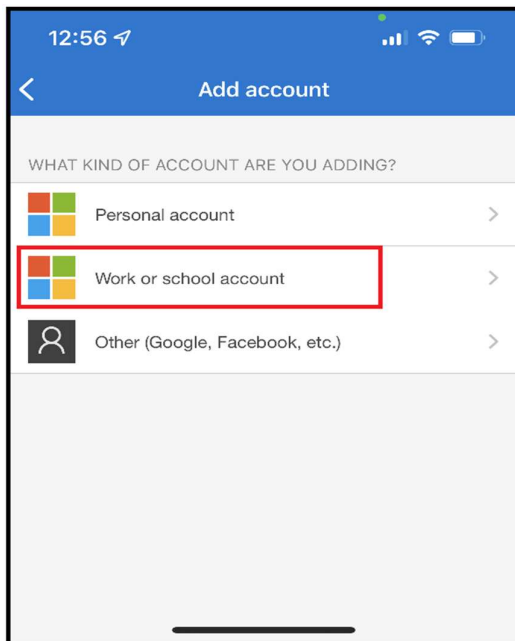

Set up the App

Once the Microsoft Authenticator app is installed, tap to open it. The first couple steps may vary slightly based on if the app had previously been installed or not.

1. Tap on the **+** (Plus) icon

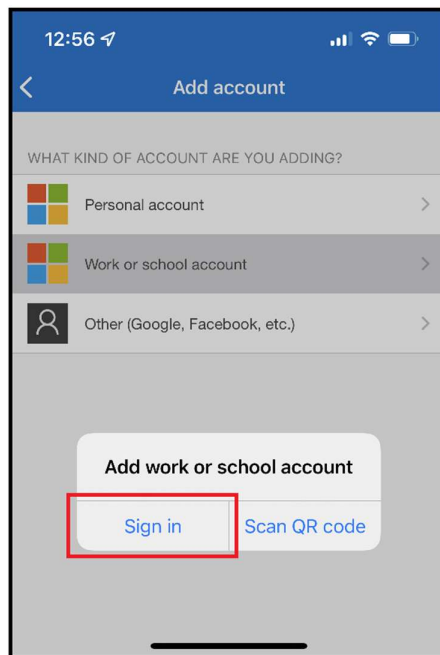

2. Tap on the **Work or school account** option

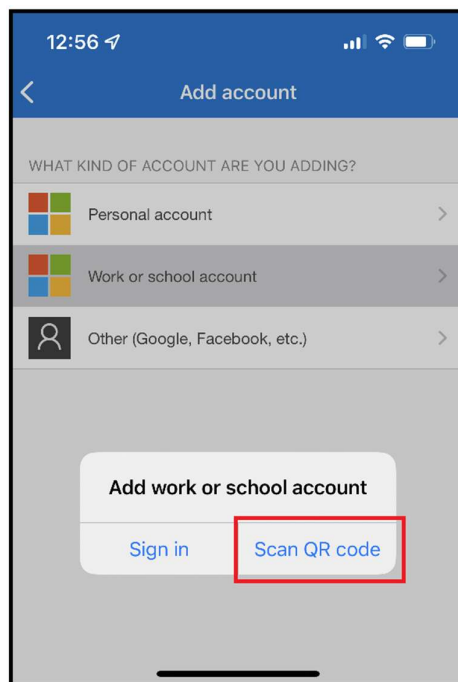

3. Tapping the **Sign in** button will require the email and password to be manually entered again.

- a. We recommend using the **Scan QR Code** button

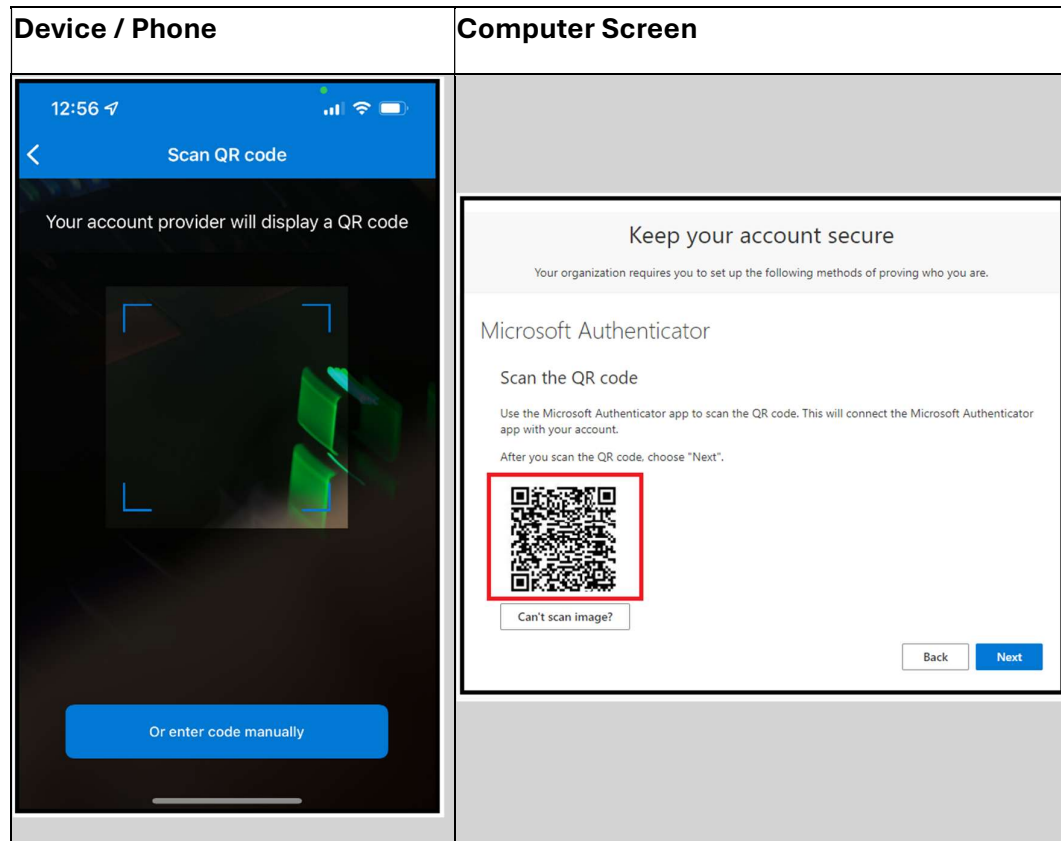

4. Tap on the **Scan QR Code** button

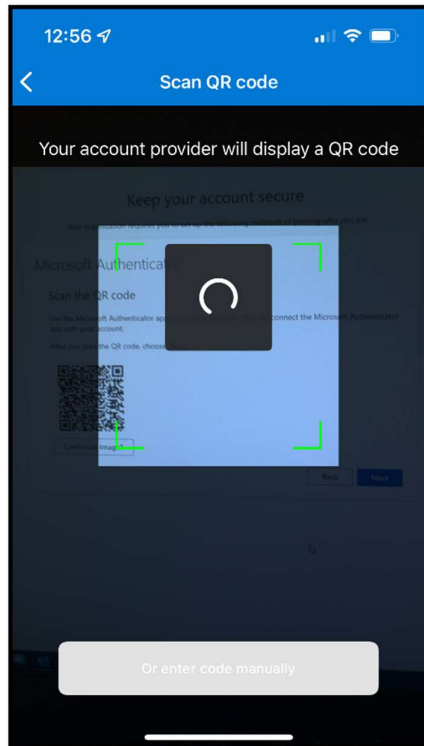

5. There may be a prompt asking for permission to use the camera. Tap **Approve** or **OK**.

6. Using your device, point it at the screen with the **QR Code**.

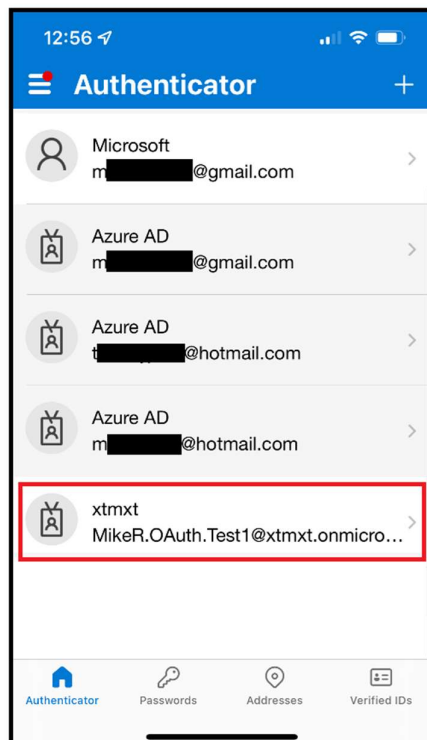

Note: The QR Code should be displayed in BOLD; if not then skip the QR Code and manually sign in. This is usually displayed when first using MFA and BOLD.

Once the Authenticator App recognizes the QR Code, there will be a brief loading screen.

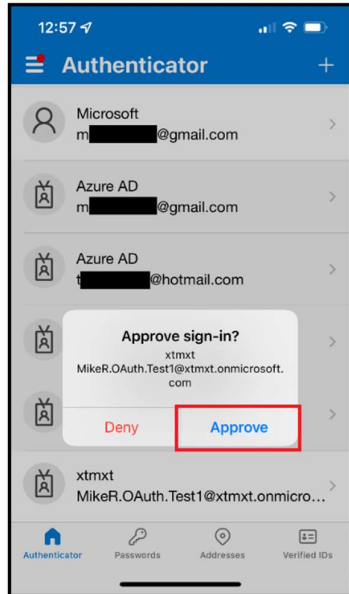

Notice the account is now listed on the Authenticator App

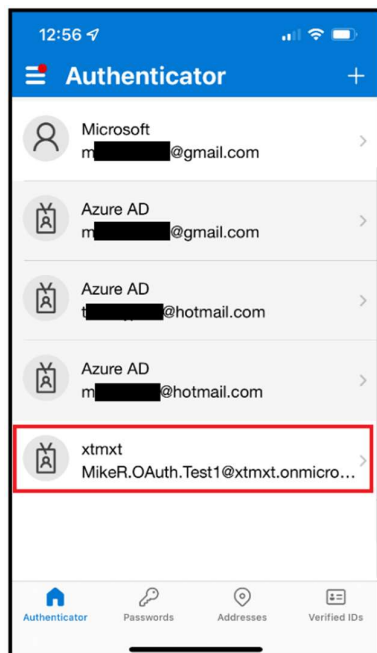

Approve the sign in

Once successfully signed in, stay in the Microsoft Authenticator app.

1. Tap on the **Approve** button

2. If the message doesn't show up and are instead asking to enter a code.
3. Tap on the name of the account.

4. Enter the code that is listed here.
